

GEMÜ® 675

Robust 2/2 way metal diaphragm valve, DN 15 - DN 300

for gaseous, liquid, inert and corrosive media in industrial applications.

Thrust bearing hand wheel for larger diameters (DN 80 and above)

Non-rising robust metal hand wheel

Standard optical position indicator

Optimally suited compressor provides long diaphragm service life

Wheephole for venting and simple leakage control

Wide choice of connections such as threaded sockets and various flange connections in ANSI, DIN, BS etc. available

Bodies available in cast iron, S.G. iron and stainless steel alloys (GEMÜ 671)

Wide selection of linings (glass, PP, PFA, PTFE, Halar, hard rubber, etc.)

Heat resistant coating of the whole body applied before lining provides good corrosion resistance against condensate and medium

Injection moulded high quality linings

Concave or convex diaphragm in different materials to suit various media

Minimal deadleg internal contour for good flow conditions and high Cv values

Threaded diaphragm stud for optimum diaphragm seat and long service life
